EXPERIENCE

Lead AI Engineer

Jan 2025 – Present

Covariance, Athens, Greece

- Leading the development of custom RAG systems and AI assistants, as well as machine learning models for enterprise clients
- Built internal APIs for model integration and cross-team deployment
- Developed proprietary pipelines for high-accuracy text and table extraction
- Supervising a team of 4 data scientists working across parallel AI pipelines for multiple client projects
- Authored technical proposals for both business stakeholders and public funding bodies, aligning solutions with business requirements and grant objectives

Research Fellow

Jul 2023 – Present

Univ. of Thessaly, EU NextGen-EU project (TAEDR-0539180)

- Developed AI/NLP pipelines for unifying multimodal biomedical data (omics, genetic, clinical)
- Part of a national precision medicine initiative with multi-institutional partners

Senior Data Scientist

Feb 2024 – Jan 2025

Covariance, Athens, Greece

- Designed fraud detection systems for processing insurance claims using big data analytics
- Developed ensemble models with advanced strategies for imputing missing data
- Converted raw medical texts into structured, analysis-ready data formats

EDUCATION

PhD in Artificial Intelligence

2021 – Present

University of Thessaly, Greece

MSc in Informatics and Computational Biomedicine

2020

University of Thessaly, Greece

Ptychion (4-year Bachelor) in Computer Science and Biomedical Informatics

2019

University of Thessaly, Greece

SKILLS

Languages Python, SQL, R, MATLAB

Frameworks PyTorch, TensorFlow, Keras, Scikit-learn, Pandas, FastAPI, Git

Specializations NLP, ML, RAG Systems, Healthcare Analytics

KEY PROJECTS

AI Content Detection. Built ML system identifying fake abstracts with 90% accuracy.

Predictive Medicine Platform. Developed ensemble models for clinical prediction using real-world data.

COVID-19 Analytics. Engineered NLP pipelines for sentiment analysis on millions of tweets.
